

Which StrathAyr lawn?

WARM SEASON GRASSES (DROUGHT TOLERANT)

Our warm season lawn varieties have been chosen as Australia's best performing warm season turf grasses for a home lawn. Warm season grasses use less water than cool season grasses. They grow well from Spring through to Autumn, in the colder months they have minimal growth and may lose some colour. We recommend installation from September through to May.

Sir Walter

Sir Walter is our superior quality soft leaf buffalo grass. This broadleaf turf is drought resistant and requires minimal maintenance after establishment. Sir Walter has been born and bred for Australian conditions and is a creeping type grass that moves over the surface and makes it easy to edge.

- Low water use
- Minimal maintenance
- Shade tolerant
- Weed resistant
- Self-repairing

Eureka Kikuyu Premium VG

Eureka Kikuyu Premium VG is our superior kikuyu that is soft, hard wearing and low maintenance. It has better winter colour than other drought tolerant grasses and is tolerant of drought, frost and wear. A fast growing creeping grass that is suitable for high traffic areas.

- Low water use
- Minimal maintenance
- Improved winter colour
- Hard wearing
- Self-repairing

Eureka Kikuyu

A hard wearing, medium blade grass, which is suitable for all domestic applications. Eureka Kikuyu prefers full sun. It is a fast growing creeping grass that is suitable for high traffic areas.

- Low water use
- Medium leaf
- Hard wearing
- Self-repairing

Nullabor Couch Legend

Nullabor Couch Legend is our premium couch grass. Nullabor Couch Legend has continually proven itself as a top performer in major sporting venues and golf courses around Australia. Nullabor Couch Legend provides the homeowner with a fine leaf, drought tolerant, hard wearing lawn with better winter colour retention than other couch grasses.

- Low water use
- Fine leaf
- Improved winter colour
- Self-repairing

Nullabor Couch

Nullabor Couch is a hybrid fine leaf couch grass suitable for all domestic applications in full sun. It is the finest of the couches and does require more care and dethatching than the other varieties.

- Low water use
- Fine leaf
- Self-repairing

Which StrathAyr lawn?

COOL SEASON GRASSES

Our cool season lawn varieties contain specially selected seed cultivars blended to grow your lawn, resulting in a lawn more luxurious and suited to a wider range of conditions that you could ever hope to achieve with generally available lawn seeds. Cool season lawn varieties can be installed anytime and will look great all year.

RTF™ Tall Fescue

Self Repairing Tall Fescue

Rhizomatous Tall Fescue (RTF™) is our self-repairing tall fescue with the added advantage of producing rhizomes. A rhizome is an underground stem or runner that extends outwards under the soil from the main plant. The rhizome will send a shoot up to the soil surface while extending new roots downward forming a new plant and thus enabling the lawn to repair itself and cover bare spots. The lawn will also establish faster than regular tall fescue so you can use it, and reduce watering, earlier.

- Self-repairing
- Strong deep root system
- Excellent evergreen colour
- Excellent disease resistance
- Grows in sun and shade

StrathAyr / LSA 10 year warrantee

StrathAyr guarantee that every lawn will be delivered in great condition, every time, and will be weed free. As a member of Lawn Solutions Australia all turf must meet accreditation standards and comes with the LSA 10 year warranty – see website for conditions.

StrathAyr Instant Lawn

StrathAyr

StrathAyr has been providing home lawns to Victorians and Tasmanians for over 40 years and now, as an accredited LSA Grower, we are excited to be able to offer you all the benefits Lawn Solutions Australia has to offer as well.

A family owned business, StrathAyr pioneered turf production in cool climate Australia and since that time has continually developed advanced turf technology.

Our products are not only used in homes across Victoria and Tasmania, they are also used in stadiums, racecourses and golf courses all over the world.

We bring out extensive turfgrass experience to you and back it up with the LSA 10 year warranty so you know you are getting the best products and services possible.

Installation

Our team of qualified landscapers can take all the hard work out of making your lawn the best in the street.

No matter how large or small, our team will fully prepare and install your lawn so you can sit back and relax with your very own slice of lush green lawn.

For a free measure and quote simply give us a call.

DIY lawn

Depending on how extensive a preparation is required you might like to DIY.

Here are some tips to get you started. You will find more information on our website or give us a call to discuss.

How to measure?

Installing your lawn is simple. You can do it yourself or have one of our preferred landscapers do the work for you.

To get started you will need to measure your lawn area and sketch it onto graph paper. It is then easy to estimate your requirements using the following formulas.

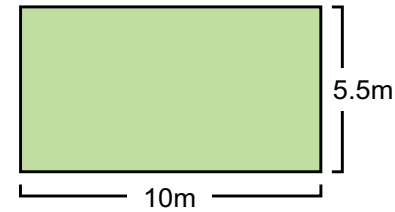

Your lawn is generally supplied in rolls or slabs.

Square or Rectangle

Multiply the width (W) by the height (H)

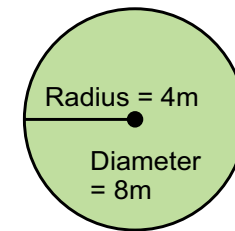

Eg. 10m x 5.5m = 55 square metres

Circle

Multiply the radius by itself then by 3.14

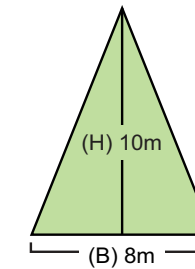

Eg. 4 x 4 x 3.14 = 51 square metres

Triangle

Multiply the height (H) by the base width (B) and divide by 2

Eg. 10m x 8m / 2 = 40 square metres

Laying your lawn

The fun begins as you lay your turf and see your lawn taking shape.

- Lightly water prepared area.
- Roll out your turf in a brick work pattern.
- Push individual strips together firmly – do not stretch or overlap.
- Cut turf with a sharp knife around plants and paths.
- Water immediately to saturate the grass mat and wet underneath soil.

Top dress Sir Walter with 5mm of washed sand (approx 1/2m³ to 100m²). Rolling Sir Walter at this stage will also help to achieve maximum soil contact.

Now your lawn is ready to enjoy.

We recommend your new lawn is laid on the day of delivery. Water immediately.

Watering tips

- How often you water your lawn will depend on the weather, the variety of lawn and the soil you have.
- Water your lawn during installation and then up to 4 times a day for the first 2 weeks. Gradually reduce watering to only as required. Once established water only when your lawn needs it.
- The grass should be allowed to partly dry out between watering. This lets in air to the root system, stimulates deeper root formation and creates a healthy and more drought resistant lawn.
- Winter watering is generally not necessary unless it is an abnormally dry season. During warmer months, a good deep watering once to twice a week will be sufficient.

Preparing for your lawn

To get the best from your Easi Lawn we recommend you complete the following preparation prior to installation:

- Rotary hoe or spread top soil to a depth of 100-150mm.
- Remove stones and pieces of organic matter.
- Level soil to 10mm below pathways and rake to an even surface. Remove all organic matter.
(25mm below paths for Sir Walter and Kikuyu lawns).
- Spread lawn starter fertiliser. (Add lime if your soil is acidic).
- Lightly roll or water the area to a firm surface.

Now you are ready to have your lawn delivered.
